```

You can modify the JSON file if you want to add more movies. To see the changes, press Ctrl-C to stop the provider service and then start the provider service again.

4.3.2 Web application overview

From the consumer perspective, we're also keeping it simple. A user interface (UI) will present a list of movies in real-world projects. In our simple project, we expose the functions the UI will need to display the data. To query the movies API, we've decided to use axios (https://axios-http.com/), which is a popular promise-based HTTP client for making HTTP requests. If you expand the consumer-web folder in your GitHub project, you should see a file named consumer.js which contains the following code snippet:
