

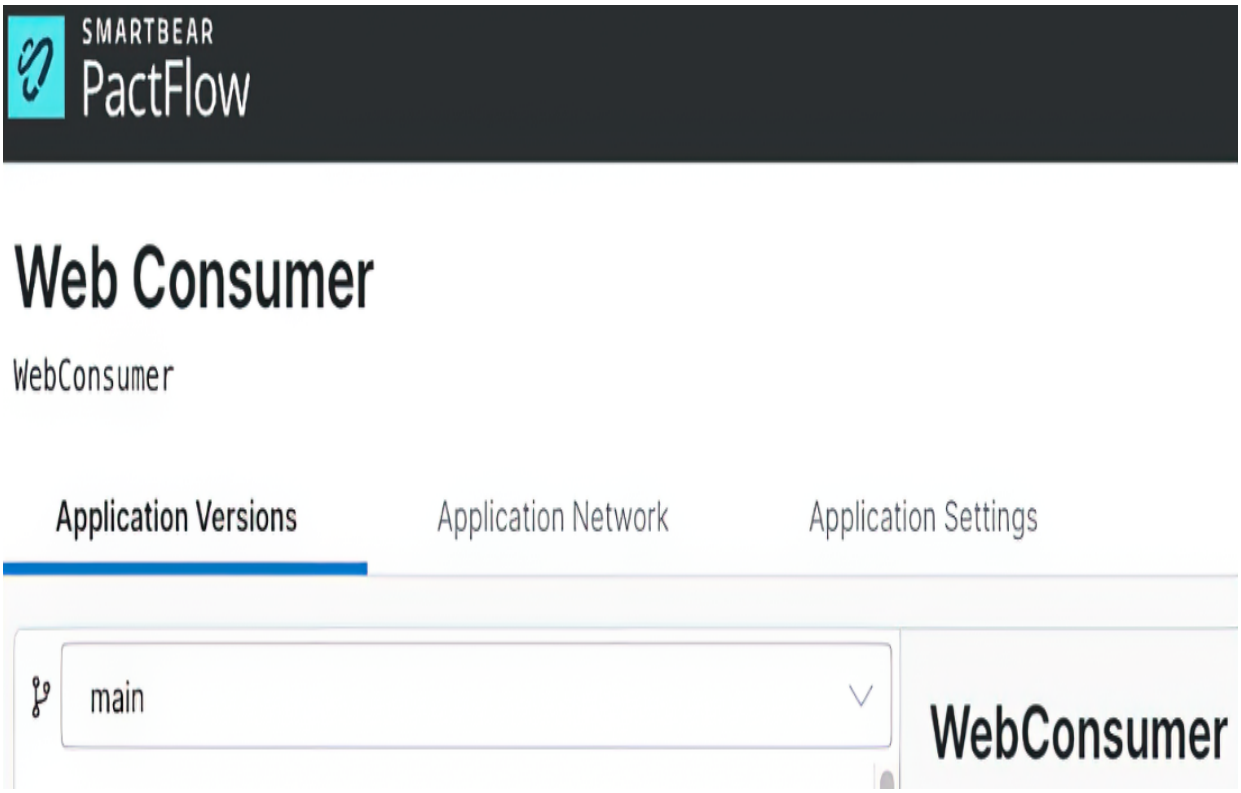

Figure 4.7 Landing page for PactFlow, a software as a service (SaaS) offering that helps you and your teams get started with Pact easily. When you create an account and navigate to the landing page, example contracts between different consumers and providers are provided to show how contract testing can work.

When uploading the contract to PactFlow, you need to provide two values and export them as environment variables:

- PactFlow base URL
- PactFlow API token

These two values can be found by clicking the Settings icon in figure 4.7. Clicking this icon should direct you to the settings page, as shown in figure 4.8.
