```
→  pact-js-example git:(main) ✗ npm run publish:pact

> pact@1.0.0 publish:pact
> pact-broker publish ./pacts --consumer-app-version=1.0.0
er-token=$PACT_BROKER_TOKEN

Created WebConsumer version 1.0.0 with tags main
```

Figure 4.9 Output of publishing the contract to PactFlow

When you navigate back to PactFlow, you should now see a new contract that has been published, as shown in figure 4.10. Notice that the status of the contract is set to Unverified. This is because the provider hasn't yet verified the contract from their end.

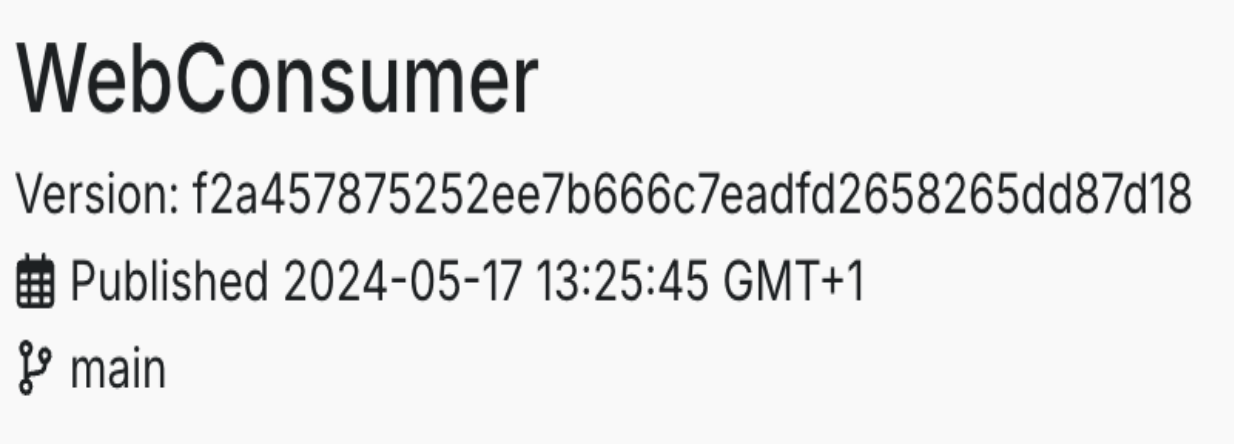

Figure 4.10 New contract uploaded to PactFlow with the status set to Unverified

And, there you have it! You've created your first consumer contract test and you've also published the contract to PactFlow. This is just one part of contract testing. The next stage is for the provider to verify the contract, which we'll explore in chapter 6. You'll also have the chance to write the contract tests for the other scenarios we defined in section 4.3.3. We
