exception format and events. These will be referenced later in the build file.

Listing 5.1 build.gradle imports

```
import org.gradle.api.tasks.testing.logging.TestExceptionFormat.FULL
import org.gradle.api.tasks.testing.logging.TestLogEvent.FAILED
import org.gradle.api.tasks.testing.logging.TestLogEvent.PASSED
import org.gradle.api.tasks.testing.logging.TestLogEvent.SKIPPED
```

Second, add the Pact ID to the `plugins` section (check the latest version from the Gradle plugin portal: https://plugins.gradle.org/plugin/au.com.dius.pact). Pact JVM was originally created at DiUS.

Listing 5.2 build.gradle plugins

```
plugins {
    ...
    id("au.com.dius.pact") version "4.3.15"
}
```

Next, include the Pact JVM consumer package from Maven Central (https://mng.bz/6Yzy) as a test implementation dependency. JUnit 5 is part of the reference here, so make sure other JUnit 5 dependencies have also been included, such as junit-jupiter. Jupiter is a dependency for writing tests with Junit5. The latest version is available from the Maven repository (https://mng.bz/o09M).

Listing 5.3 build.gradle dependencies

```
dependencies {
    ...
    testImplementation("org.junit.jupiter:junit-jupiter:5.9.0")
    testImplementation("au.com.dius.pact.consumer:junit5:4.3.15")
}
```

Finally, add a task with type test and configuration, including using JUnit platform and test logging. In addition, add system properties to overwrite Pact files.
