4.4. In addition, set the provider version to GitHub commit Secure Hash Algorithm (SHA). You can export them by typing the following into your terminal:

```
# Mac
export PACT_BROKER_BASE_URL=<YOUR_BASE_URL>
export PACT_BROKER_TOKEN=<YOUR_TOKEN>
export GITHUB_SHA=$(git rev-parse HEAD)
# Windows
set %PACT_BROKER_BASE_URL%=<YOUR_BASE_URL>
set %PACT_BROKER_TOKEN%=<YOUR_TOKEN>
set %GITHUB_SHA%=$(git rev-parse HEAD)
```

If you're a Windows user, replace `export` with `set`. To run the test, open up your terminal, and run the following command:

```
npm run test:provider
```

Alternatively, you can also add these two environment variables as part of your .bash_ profile file so you don't have to export the Pact Broker token and URL every time. After running the command, you should see an output similar to figure 6.3.
