```
      });
    });
  });
});
```

RUNNING THE CONSUMER CONTRACT TEST

In your terminal, use the same command found in the package.json file to run the consumer contract test:

```
npm run test:web:consumer
```

This should generate the same output as shown in figure 6.5.

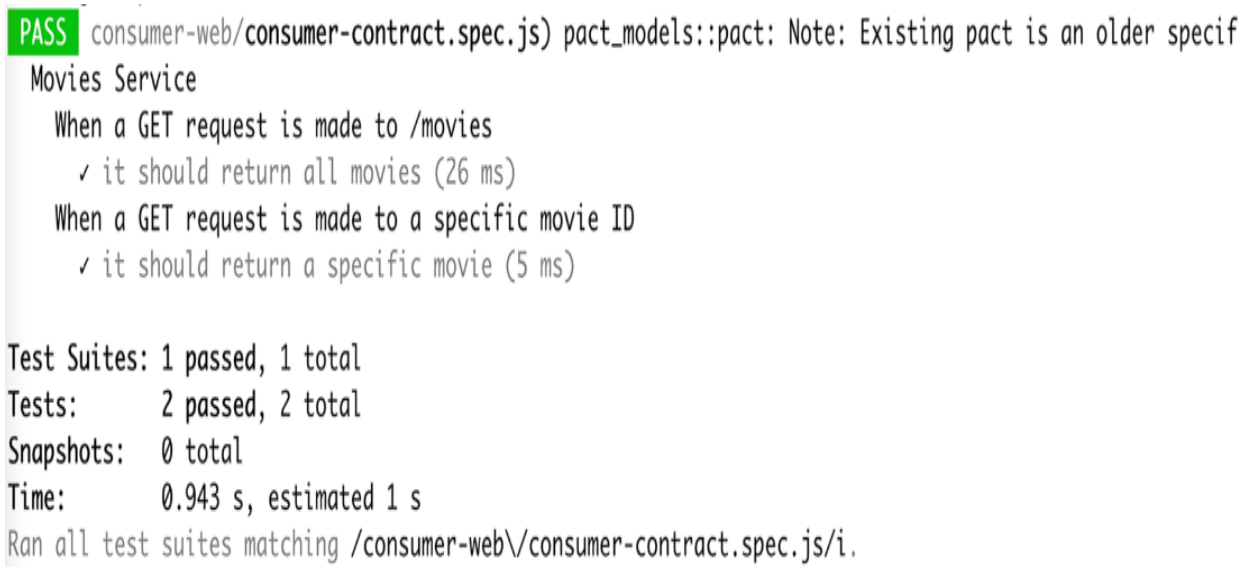

Figure 6.5 Test output of running the consumer contract test

UPLOADING THE NEW CONTRACT

Because there are now two interactions registered, this will generate a new contract containing the expectations for the second test. Use the same command found in the package.json file to upload the new contract to PactFlow. Usually this would run as part of continuous integration (CI) only and requires GitHub commit SHA and GitHub branch environment variables to be set:
