If you would like to learn about GraphQL in more detail, check out the following resources:

- *GraphQL in Action* by Samer Buna (Manning, 2021): www.manning.com/books/graphql-in-action
- *Microservice APIs* by José Haro Peralta (Manning, 2022): www.manning.com/books/microservice-apis
- "Introduction to GraphQL": https://graphql.org/learn/
- GraphQL tutorials: www.apollographql.com/tutorials/

7.2 GraphQL application overview

To demonstrate how contract testing can be used in a GraphQL setting, we've also created an example application that you can play around with based on our movies API, which you can find in the same GitHub project (https://github.com/mdcruz/pact-js-example) that we've been referencing. If you need additional guidelines on how to fork or download the project, refer to appendix B, specifically sections B.3 and B.4. Once you have a copy of this GitHub project in your local machines, switch to the setup-contract-tests-graphql branch.

We're using Apollo (www.apollographql.com/), which is a collection of tools for working with GraphQL applications. On the server side, we're using Apollo Server, a JavaScript library for building GraphQL APIs, while on the client side, we're using Apollo Client, a JavaScript library for consuming GraphQL APIs on the frontend.

All the code for this chapter is in the graphql folder, as shown in this folder structure:

```
> consumer-mobile
> consumer-web
> data
> graphql
> pacts
> provider
```

In the real world, this project structure would be unlikely because consumers and providers will probably live in different projects. We've
