In many cases, the original source code has been reformatted; we've added line breaks and reworked indentation to accommodate the available page space in the book. Additionally, comments in the source code have often been removed from the listings when the code is described in the text. Code annotations accompany many of the listings, highlighting important concepts.

The main tools used in this book—Pact, PactFlow, and GitHub Actions—have active communities and support. For community support on the open source Pact framework, check out their documentation or join their slack channel (https://pact.io). For PactFlow, contact their sales or support team (https://pactflow.io). For support on GitHub Actions, checkout their documentation (https://docs.github.com/en/actions) or ask the GitHub community (https://github.com/orgs/community/discussions).

You can get executable snippets of code from the liveBook (online) version of this book at https://livebook.manning.com/book/contract-testing-in-action. The complete code for the examples in the book is available for download from the Manning website at https://www.manning.com/books/contract-testing-in-action and from GitHub at https://github.com/mdcruz/pact-js-example.
