7.3.5 Publishing the contract to Pact Broker

To publish the GraphQL consumer contract to the PactFlow Pact Broker, we'll use the same script `publish:pact` that we created in chapter 4. Make sure you've exported your Pact Broker URL and token, as first explained in chapter 4, section 4.4, and then run the following command:

```
npm run publish:pact
```

You should see a message in your terminal, similar to figure 7.6, with two published contracts—one for the web consumer and one for GraphQL.
