consider what the right option is for your team. By the end of this chapter, you should be confident about deciding on the right Pact Broker option.

In previous chapters, we've touched on publishing contracts to and verifying contracts with Pact Broker. Figure 9.1 shows a simplified view of the Pact Broker role. Pact Broker is part of the contract testing flow in the following steps:

1. The consumer pushes the consumer contracts to Pact Broker.
2. The provider pulls the contracts from Pact Broker.
3. The provider publishes the verification status of the contract to Pact Broker.
4. The consumer pulls the verification status from Pact Broker to check if they can deploy their app.
