

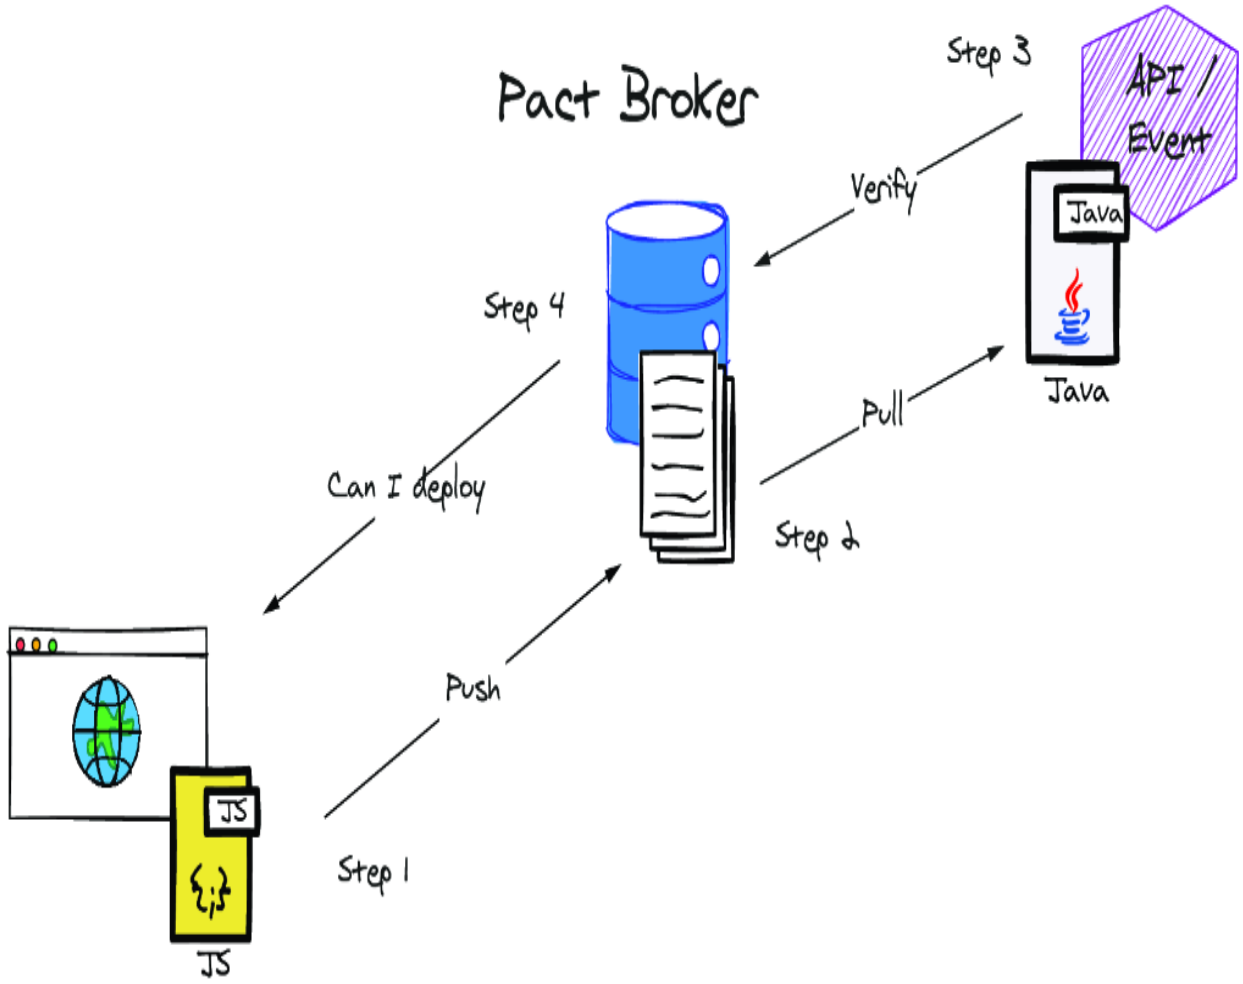

Figure 9.1 Contract testing flow, showing Pact Broker interactions with consumers and providers

The Pact Broker's role within the software development life cycle needs some explanation. When working in distributed teams building microservices, there are many moving parts.

9.1 Why we need Pact Broker

Why do we need Pact Broker for the contract testing process? There are several ways that Pact Broker supports the process:

- Sharing contracts across repositories
- Changing contracts between branches and environments
- Coordinating releases across teams
