Pact Broker provides a simple view of the different versions and verification statuses. The matrix, which is a table of each consumer contract and provider version, is shown in figure 9.5. The matrix shows that both consumer versions 1.0.0 and 1.02 have been verified successfully by provider version 1.0.0. However, consumer version 1.0.1 still needs verification by the provider. The UI team can deploy consumer versions 1.0.0 and 1.0.2, whereas 1.0.1 wouldn’t be safe to deploy currently.
