Figure 10.6 Two contracts from the WebConsumer verified successfully by the MoviesAPI provider. One of the contracts is from the same branch, test-pact-features, and the other is from the main branch.

At this stage, you should have an improved contract testing workflow where both consumers and providers record versions based on the GitHub commits and also record the GitHub branch from where the commits are made. The CI/CD setup that we have now is illustrated in figure 10.7.

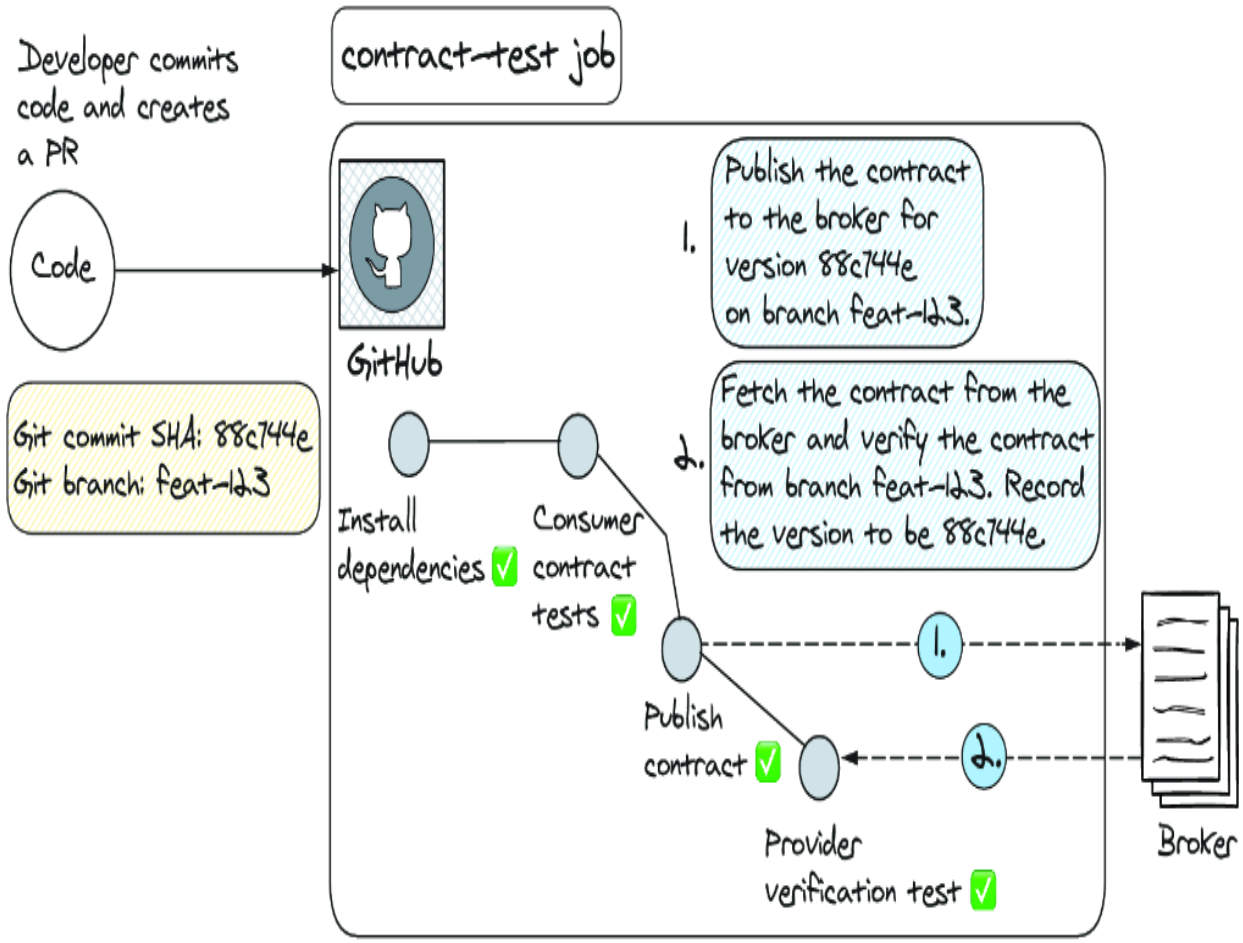

Figure 10.7 CI/CD setup for our contract testing job with versions and branches configured to allow providers to verify the correct contracts

10.2.3 Creating environments

Apart from recording the versions and branches, it's also a good idea to record the environment in which a version and a branch are deployed or released. This allows Pact to check if a specific version can be safely deployed.
