```
pact-broker record-release
--pacticipant MoviesAndroidApp
--version $GITHUB_SHA
--environment production
```

When you log in to PactFlow, the release will be recorded under a different field called Release Environment, as shown in figure 10.11.

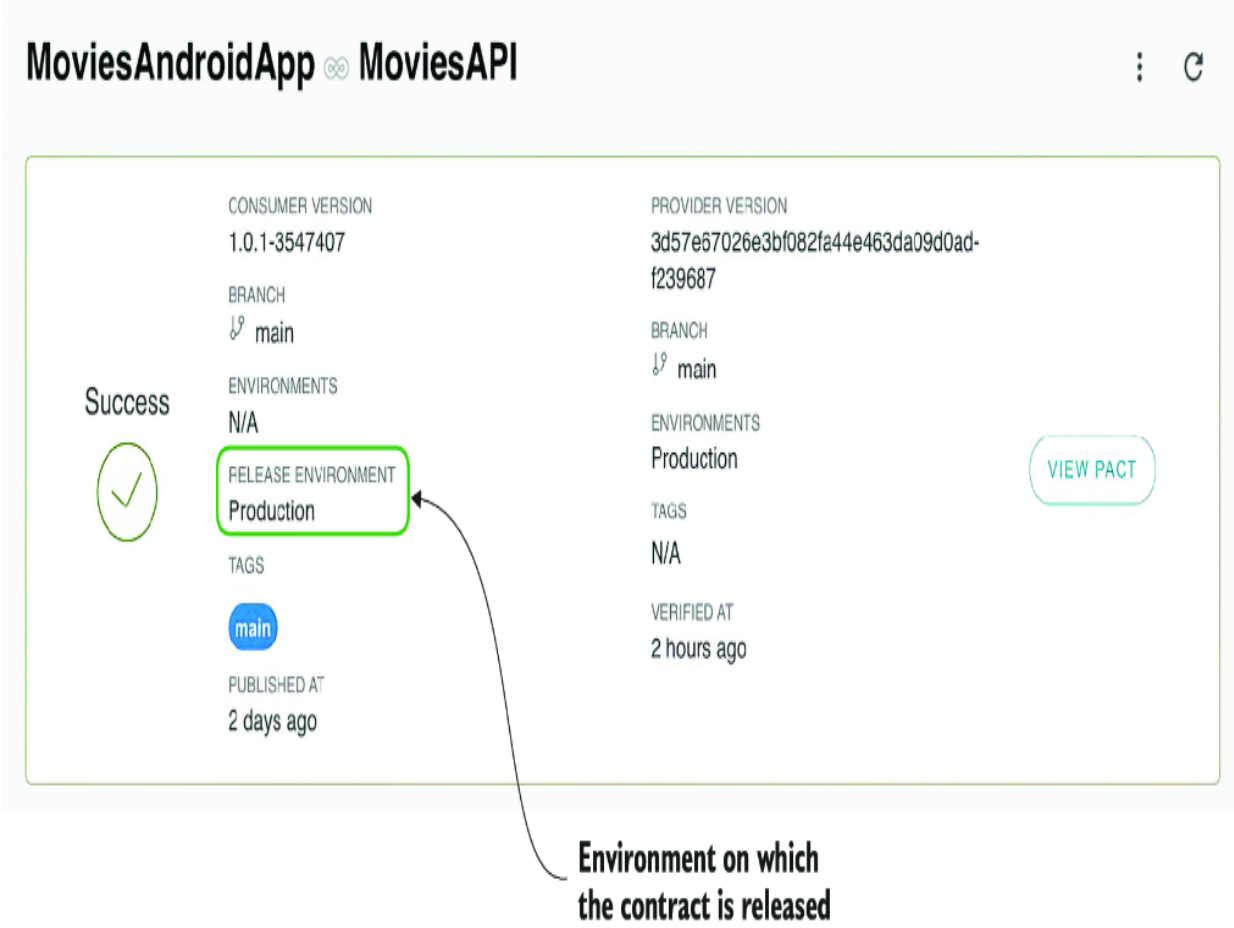

Figure 10.11 MoviesAndroidApp and MoviesAPI integration with the consumer release recorded to the production environment

At this stage, the contract testing workflow should now have versions, branches, and deployments or releases configured. The CI/CD setup that we have now is illustrated in figure 10.12.
