10.3 Chapter exercises

To apply what you learned in sections 10.1 and 10.2, we want you to add the GraphQL contract tests introduced in chapter 7 as part of the GitHub workflow. The following exercises will test your knowledge about the advanced concepts of contract testing, such as versioning, branches, environments, deployments or releases, and can-i-deploy:

- *Exercise 10.1*—Add the GraphQL consumer and provider tests as separate steps in contract-test-sample.yml.
- *Exercise 10.2*—Update the graphql/provider/graphql-server-contract.spec.js file, and configure the provider version to use the `GITHUB_SHA` environment variable for automated versioning.
- *Exercise 10.3*—Update the graphql/provider/graphql-server-contract.spec.js file, configure the provider version branch to use the `GITHUB_BRANCH` environment variable for automated branching, and set up the `consumerVersionSelectors` to have the `mainBranch` and `matchingBranch` properties set to `true`.
- *Exercise 10.4*—Create two new scripts in your package.json file to record a production deployment to mimic the latest versions of GraphQL consumer and provider being deployed to production.
- *Exercise 10.5*—Add the record deployment scripts for GraphQL consumer and provider tests as separate steps in contract-test-sample.yml.
- *Exercise 10.6*—Update the graphql/provider/graphql-server-contract.spec.js file, and update `consumerVersionSelectors` to have the `deployedOrReleased` property set to `true`.
- *Exercise 10.7*—Create two new scripts in your package.json file to use the can-i-deploy tool to ask Pact if subsequent GraphQL consumer and provider versions are safe to deploy to production.
- *Exercise 10.8*—Add the can-i-deploy scripts for GraphQL consumer and provider tests as separate steps in contract-test-sample.yml.

Feel free to test each step as you go along before proceeding to the subsequent step. If you get stuck at any point, refer to the main branch of
