```
    {
      "event_type":
"contract_requiring_verification_published",     #1
      "client_payload": {
        "pact_url": "${pactbroker.pactUrl}",     #2
        "sha": "${pactbroker.providerVersionNumber}",     #3
        "branch": "${pactbroker.providerVersionBranch}"     #4
      }
    }
```

#1 The name of the event
#2 An HTTP-based URL containing the newly published contract
#3 The provider version number
#4 The branch associated with the provider version number

Once all the information is added, you should have a screen similar to figure 10.17.

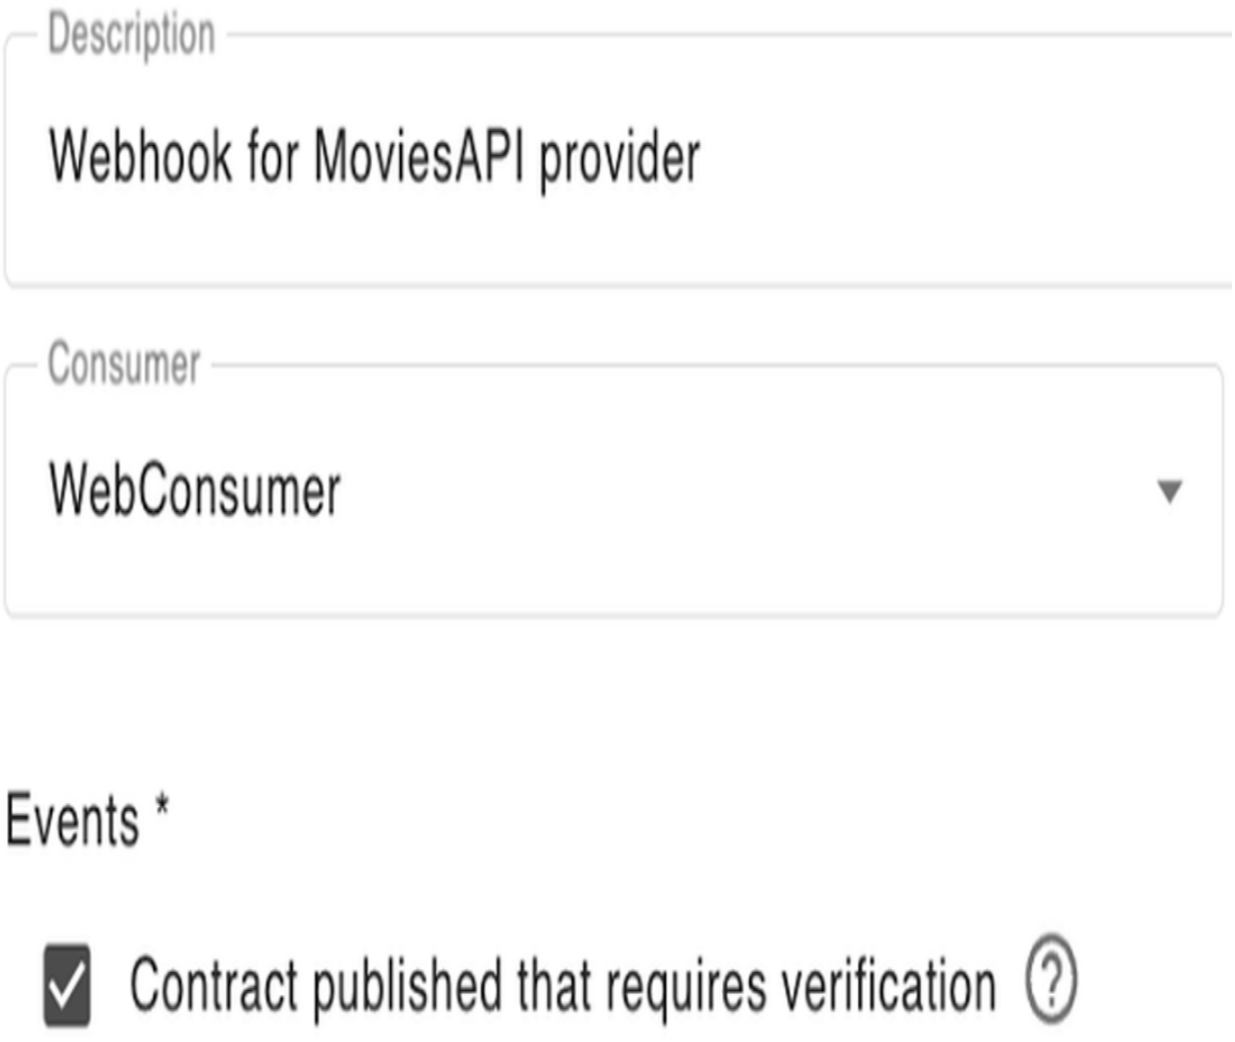

Figure 10.17 Edit the webhook screen in PactFlow with all the relevant information fields to create a webhook successfully.
