10.4.2 Creating a different GitHub workflow for provider verification

Now that we've created the webhook, we also need to create a separate GitHub workflow for the provider verification that will be triggered whenever the "contract requiring verification published" event is observed.

If you check out the main branch of the example GitHub project at https://github.com/mdcruz/pact-js-example, you should see another file named webhook-sample.yaml inside the .github/workflows directory, and it should contain the following content:

```
name: contract_requiring_verification_published     #1

on:                                                   #2
  repository_dispatch:                                #2
    types:                                            #2
      - contract_requiring_verification_published     #2

env:                                                        #3
  PACT_BROKER_TOKEN: ${{ secrets.PACT_BROKER_TOKEN }}       #3
  PACT_PAYLOAD_URL:
${{ github.event.client_payload.pact_url }}                 #3
  GITHUB_SHA: ${{ github.event.client_payload.sha }}        #3
  GITHUB_BRANCH: ${{ github.event.client_payload.branch }}  #3

jobs:
  contract-verification-via-webhook:     #4
    runs-on: ubuntu-latest
    steps:                                    #5
      - name: checkout specific SHA if        #5
webhook providers pact URL                    #5
        uses: actions/checkout@v4             #5
        if: ${{env.PACT_PAYLOAD_URL}}         #5
        with:                                 #5
          ref: ${{env.GITHUB_SHA}}            #5
      - uses: actions/setup-node@v4           #5
        with:                                 #5
          node-version: 18                    #5
      - name: Install dependencies            #5
        run: npm i                            #5
      - name: Run provider contract tests     #5
        run: npm run test:provider            #5
```

#1 The workflow's name
#2 The event that will trigger the workflow
#3 The environment variables needed for the workflow
#4 The job's name
#5 The series of steps to run the workflow
