

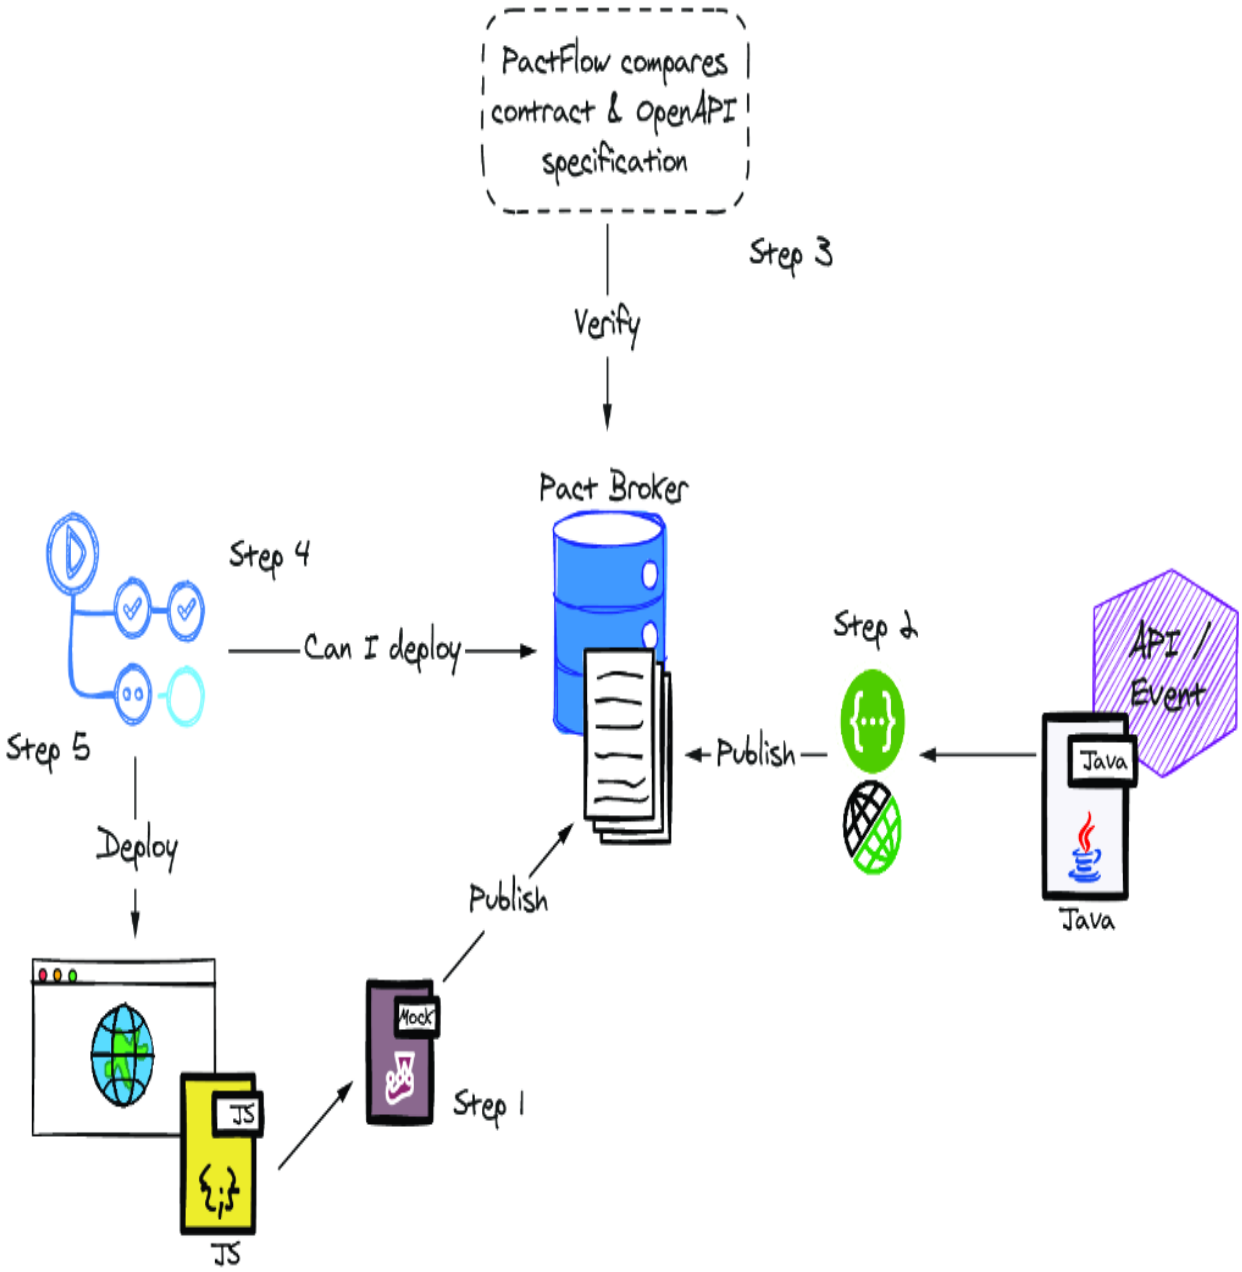

Figure 11.2 The PDCT life cycle, describing when the Pact broker compares consumer contract with the provider OpenAPI specification

With the arrival of PDCT, both the consumer and provider use their current testing setup, use PactFlow adapters to generate contracts from their existing tools, and convert them into a contract testing solution easily, without the need for using a different testing framework such as Pact.

The thought of not using another different testing framework sounds amazing, right? However, one of the many reasons we chose Pact in this
