you'll find the test output report at ./output/postman-report.md, containing output details as shown in the following listing. The output includes the run stats with details of the test results.

Listing 11.15 Postman report output JSON

```
  "run": {
    "stats": {
      "requests": {
        "total": 2,
        "pending": 0,
        "failed": 0
      },
      "tests": {
        "total": 2,
        "pending": 0,
        "failed": 0
      },
    }
```

11.3.2 Dredd and OpenAPI example

In this example, we'll use Dredd to verify the contracts using the OpenAPI specification. The Dredd npm package tests the endpoints using default or example values described within the OpenAPI documentation. Then, the OpenAPI specification and Dredd test results for PactFlow will be published to compare with the consumer contract. Running the test from the provider project, make sure to install the Dredd npm package:

```
npm install --save-dev Dredd
```

The provider project generates an OpenAPI specification JSON file from the documented code, as shown in the following listing. We're documenting the Express server functions, which contain the request handlers.
