```
curl -X GET 'http://localhost:3001/swagger.json' > ./output/movies-api.json
```

11.3.4 Checking consumer contracts

The provider has now published its OpenAPI specification and test verification results to PactFlow. Because its API is already in production, it has been recorded as deployed to that environment (as shown in chapter 10, section 10.2.3). Then, the consumer can check whether they can deploy their changes safely from the contract generated by their mocks, as shown in figure 11.6.
