development teams when teams are developing the backend or frontend in different programming languages. API documentation is often created in different forms, either as a wiki page, OpenAPI spec (www.openapis.org/), or another format. Let's explore OpenAPI and compare how it's different from the contract generated by contract testing.

OpenAPI, formerly called the Swagger specification (https://swagger.io/docs/specification/about/), is a standard that defines an API's details and makes it human-readable for other people to use the API. Let's have a look at an example OpenAPI specification:

```
openapi: 3.0.3
info:
  title: Contract Testing - OpenAPI 3.0
  version: 1.0.0
tags:
  - name: user
    description: Operations about user
paths:
  /user/{id}:
    get:
      summary: Get an existing user
      operationId: getUser
      parameters:
        - name: id
          in: path
          description: Id of user to return
          required: true
          schema:
            type: integer
      responses:
        '200':
          description: successful operation
          content:
            application/json:
              schema:
                $ref: '#/components/schemas/User'
components:
  schemas:
    User:
      type: object
      properties:
        id:
          type: integer
          format: int64
          example: 10
        firstName:
          type: string
          example: Marie
        lastName:
          type: string
          example: Cruz
```
