A.1.5 Pact Plugins

Recently, Pact created the infrastructure for plugins, which integrates with their tools. For example, different protocols such as gRPC are supported via a plugin. This approach aims to extend support for many more use cases using the Pact shared core.

A.1.6 Swagger Mock Validator

A notable mention, which has come out of the Pact community, is the swagger-mock-validator created by Atlassian. This CLI tool, similar to the can-i-deploy Pact tool, compares mocks with OpenAPI specs. Mocks are supported in Pact and WireMock formats. Specifications supported in Swagger 2 and OpenAPI 3 formats. This means the mocks are always up-to-date with the API specification as it evolves.

BENEFITS OF PACT

- Large set of different languages supported
- Large active community involved in supporting through code contributions and forums
- Backing from testing giant SmartBear (as they have a vested interest in the success of PactFlow that they acquired in 2022)
- Extensive number of blogs and tutorials exist online (some supplied by the authors of this book)

DOWNSIDES OF PACT

- Doesn’t support all protocols natively, for example, protocol buffers
- Doesn’t support all transports natively, for example, gRPC

A.1.7 Spring Cloud Contract

Spring enables consumer-driven contract (CDC) development of JVM-based applications (https://mng.bz/NBq1). Spring supports HTTP and
