

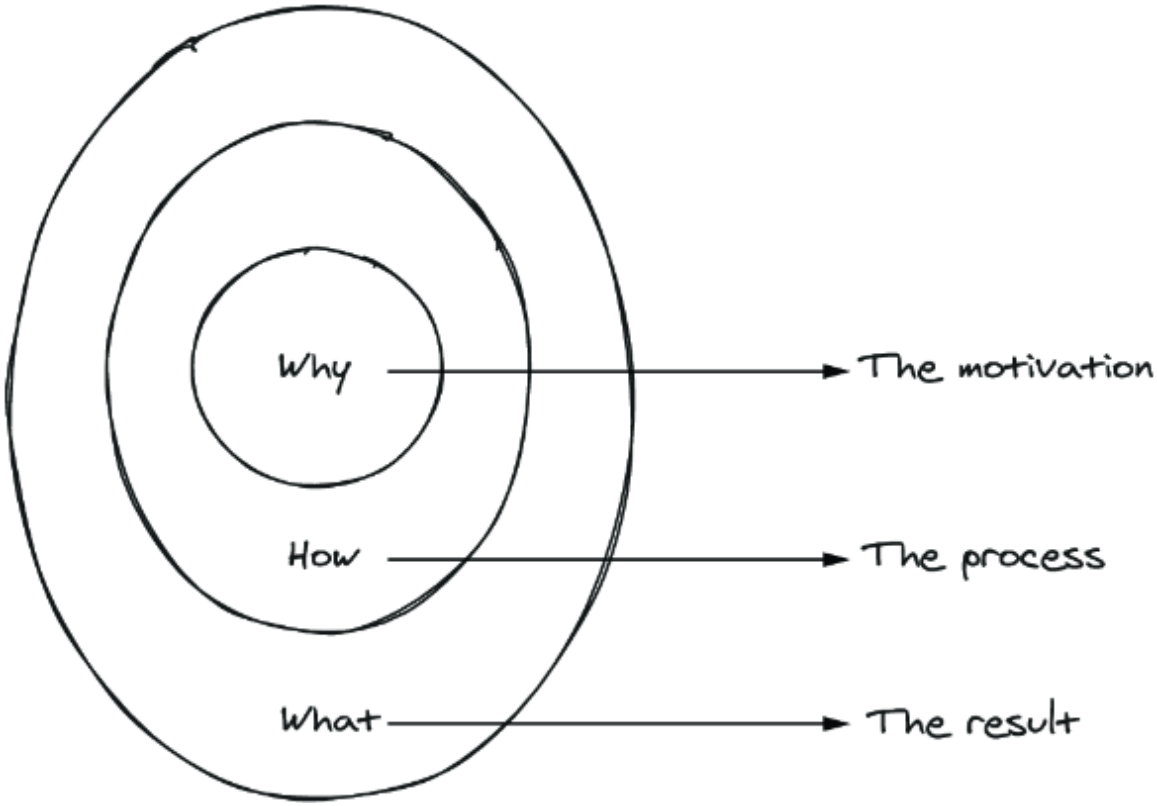

Figure 2.9 The Golden Circle model by Simon Sinek

When introducing contract testing to your teams, it's crucial to start by explaining the Why behind the initiative. Consider your motivations for adopting contract testing. Is it to replace flaky integration tests and gain confidence earlier in the development process? Is it to improve communication and collaboration with other teams? Is it to identify and address problems before they affect your users? Is it to safely deploy breaking changes to production environments? Clearly articulating your reasons for introducing contract testing will enable you to influence your teams more effectively and obtain buy-in more quickly than simply explaining the technical aspects of contract testing and the tools involved.

By focusing on the Why, you connect with your teams on a deeper level, appealing to their intrinsic motivations and shared goals. When team members understand the purpose and benefits of contract testing, they are more likely to be engaged and actively support its adoption. Starting with the Why helps create a sense of purpose, aligns the team's efforts, and fosters a shared understanding of the value that contract testing brings.
