3.1 What is a consumer?

3.2 What is a provider?

3.3 What is a contract?

3.4 What is a contract broker?

3.5 Consumer-driven contract testing life cycle

3.6 Contract testing tools

3.6.1 Contract-based tools

3.7 Contract Testing Approaches

3.7.1 Consumer-driven contract testing

3.7.2 Provider-driven contract testing

3.8 Communication types supported by contract testing

3.8.1 GraphQL

3.8.2 Event-driven systems

Part 2 Consumer-driven contract testing

4 Implementing consumer-driven contract testing for web applications

4.1 Guidelines in writing consumer contract tests

4.1.1 The focus of a consumer contract test

4.1.2 The importance of using mocks instead of stubs

4.1.3 Using loose matchers to avoid high coupling

4.1.4 The importance of writing isolated contract tests

4.1.5 Using can-i-deploy to verify that you can safely deploy to production

4.2 Contract testing tooling setup for the consumer

4.2.1 Requirements

4.3 Consumer contract tests between a web application and data provider

4.3.1 Movies API overview

4.3.2 Web application overview
