7.1 A brief introduction to GraphQL

7.2 GraphQL application overview

7.2.1 GraphQL server overview

7.2.2 Running the GraphQL server

7.2.3 Consumer overview

7.3 Consumer contract tests between a consumer and GraphQL layer

7.3.1 Importing the required dependencies

7.3.2 Setting up the mock provider

7.3.3 Registering the consumer expectation

7.3.4 Verifying the consumer test and generating the contract

7.3.5 Publishing the contract to Pact Broker

7.4 Provider contract tests between a consumer and GraphQL layer

7.5 Chapter exercise

8 Contract testing for event-driven architecture

8.1 Introduction to asynchronous API testing

8.2 Pact consumer message setup with Kafka

8.2.1 Requirements

8.3 Kafka consumer implementation

8.4 Event handler consumer test implementation

8.5 Event consumer contract generation

8.6 Kafka producer implementation

8.7 Event producer test implementation

9 Storing, hosting, and securing the contracts

9.1 Why we need Pact Broker

9.1.1 Pact Broker core features

9.2 Pact Broker options
