2. Installing a C Compiler:

- **Windows**:
    - **MinGW** (Minimalist GNU for Windows): Provides GCC (GNU Compiler Collection).
    - **TDM-GCC**: Another GCC distribution for Windows.
- **macOS**:
    - **Xcode**: Includes a C compiler and is available from the App Store.
    - **Homebrew**: Install GCC using `brew install gcc` .
- **Linux**:

Most distributions come with GCC pre-installed. If not, install it using package managers:

```
sudo apt-get install gcc     # Debian/Ubuntu
sudo yum install gcc         # Red Hat/CentOS
```

    -

3. Setting Up on Different Systems:

- **Configuring Environment Variables (Windows)**:
    - Add the compiler's bin directory to your system's PATH variable to use the compiler from any command prompt.

4. Verifying the Installation:

Open your terminal (or command prompt) and type:
