```
grade = input("Enter new grade (leave empty to keep current): ")

# Update only if new data is provided
if name:
        students[roll_number]['name'] = name
if age:
        students[roll_number]['age'] = int(age)
if grade:
        students[roll_number]['grade'] = grade

print(f"Student record for roll number {roll_number} updated successfully!")
```

In this function:

- We check if the student exists based on the roll number.
- We then display the current details and prompt the user to enter updated information, allowing them to leave any field blank to retain the current data.

---

4. **Delete (Remove a Student):** This function will remove a student record from the system using the roll number.

```
def delete_student(students):
    roll_number = int(input("Enter roll number to delete: "))
    if roll_number in students:
```
