```
        del students[roll_number]
        print(f"Student with roll number {roll_number} deleted successfully!")
    else:
        print("Error: Student with this roll number does not exist.")
```

Here:

- We check if the student exists using the roll number.
- If the student is found, we delete the record from the dictionary.

Step 3: Create the Main Menu

We need to create a function that will display the menu and allow the user to choose which operation they would like to perform. The program should keep running until the user decides to exit.

```
def show_menu():
    print("\nStudent Management System")
    print("1. Add a Student")
    print("2. View All Students")
    print("3. Update Student Record")
    print("4. Delete a Student")
    print("5. Exit")

def main():
```
