Project 4: Tic-Tac-Toe Game

In this project, we will implement a **Tic-Tac-Toe** game using a text-based interface in Python. Tic-Tac-Toe is a classic two-player game played on a 3x3 grid. The game alternates between two players, 'X' and 'O,' who take turns marking their symbols in the empty grid. The goal is to get three of your marks in a row, either horizontally, vertically, or diagonally, before your opponent does.

The goal of this project is to build a simple game that:

- Allows two players to take turns.
- Validates user input to ensure the moves are within bounds and that no cell is occupied.
- Checks for a winner or a draw after each move.
- Displays the game board after each move to keep the players updated on the state of the game.

Step-by-Step Guide to Build the Tic-Tac-Toe Game

We will break down the process of creating this game into the following steps:

1. **Setting Up the Game Board**
2. **Displaying the Game Board**
3. **Handling Player Turns**
4. **Checking for a Winner**
5. **Checking for a Draw**
