Chapter 12: Appendix

Important Standard Library Functions

Python's Standard Library is one of its most powerful features. It provides a wealth of built-in modules and functions, enabling you to accomplish common tasks without having to write extensive code from scratch. Below is a detailed guide to some of the most commonly used functions in Python's Standard Library.

1. `math` Module

The `math` module provides mathematical functions that are often used in various applications, ranging from basic arithmetic to complex mathematical computations.

`math.sqrt(x)` : Returns the square root of a number `x` .

```
import math
print(math.sqrt(16))  # Output: 4.0
```

-

`math.factorial(x)` : Returns the factorial of a number `x` .

```
import math
print(math.factorial(5))  # Output: 120
```
