os.remove(path) : Deletes a file at the specified `path` .

```
import os
os.remove('file.txt')
```

-

3. `random` Module

The `random` module provides functions for generating random numbers and selecting random items from a sequence.

random.randint(a, b) : Returns a random integer between `a` and `b` .

```
import random
print(random.randint(1, 10))  # Output: Random number between 1 and 10
```

-

random.choice(sequence) : Returns a randomly selected element from a sequence.

```
import random
fruits = ['apple', 'banana', 'cherry']
print(random.choice(fruits))  # Randomly selects a fruit from the list
```
