random.shuffle(sequence) : Randomly shuffles the elements of a list.

```
import random
cards = [1, 2, 3, 4, 5]
random.shuffle(cards)
print(cards)  # Output: [4, 1, 3, 2, 5] (shuffled list)
```

-

4. datetime Module

The datetime module is used for working with dates and times.

datetime.datetime.now() : Returns the current local date and time.

```
import datetime
print(datetime.datetime.now())  # Output: Current date and time
```

-

datetime.datetime.strptime(date_string, format) : Converts a string into a datetime object.

```
import datetime
date_str = '2024-12-03'
date_obj = datetime.datetime.strptime(date_str, '%Y-%m-%d')
print(date_obj)  # Output: 2024-12-03 00:00:00
```
