Floating-Point Types (float and double):

Used to store decimal numbers.

float pi = 3.14;

double precise_pi = 3.141592653589;

2.

Character Type (char):

Used to store single characters. They are enclosed in single quotes.

char letter = 'A';

3.

Modifiers:

Modifiers alter the size or range of the data type. Examples include:

- short
- long
- signed
- unsigned

Example:

short int a; // Smaller range integer
