Explanation:

In this example, the condition `num > 5` is true, so the message is printed.

---

2. if-else Statement

The `if-else` statement provides two blocks of code: one that runs if the condition is true, and another that runs if the condition is false.

Syntax:

```
if (condition) {

    // Code to execute if the condition is true

} else {

    // Code to execute if the condition is false

}
```

Example:

```
#include <stdio.h>

int main() {
```
