```
        printf("Number is greater than 10\n");
    } else if (num > 5) {
        printf("Number is greater than 5 but less than or equal to 10\n");
    } else {
        printf("Number is 5 or less\n");
    }
    return 0;
}
```

Explanation:

The program checks each condition in order. Since `num > 5` is true, the corresponding message is printed.

---

4. switch Statement

The `switch` statement is used to simplify the code when there are multiple conditions based on the value of a single variable.

Syntax:
