Explanation:

In this example, the value of `day` is 3, so the program prints "Wednesday."

Loops

Loops are used to execute a block of code repeatedly. C supports three types of loops:

1. **for Loop**
2. **while Loop**
3. **do-while Loop**

1. for Loop

The `for` loop is used when the number of iterations is known beforehand. It consists of three parts: initialization, condition, and increment/decrement.

Syntax:

```
for (initialization; condition; increment/decrement) {
    // Code to be executed
}
```

Example:
