```
    print(f"My {animal_type}'s name is {pet_name}.")

describe_pet(animal_type="dog", pet_name="Buddy")
```

2.

Default Parameters: Provide default values, making parameters optional.

```
def greet(name="Guest"):
    print(f"Hello, {name}!")

greet()  # Outputs: Hello, Guest!
```

3.

Variable-Length Arguments: Functions can accept an arbitrary number of arguments using `*args` (for non-keyword arguments) or `**kwargs` (for keyword arguments).

```
def sum_all(*numbers):
    return sum(numbers)

print(sum_all(1, 2, 3, 4))  # Outputs: 10
```

4.

Returning Values from Functions:
