Example:

```
int numbers[5];  // Declares an array of 5 integers
```

Initializing Arrays

Arrays can be initialized at the time of declaration.

Example:

```
int numbers[5] = {10, 20, 30, 40, 50};  // Initializes the array with 5 values
```

If fewer elements are provided than the size of the array, the remaining elements are initialized to zero.

```
int numbers[5] = {1, 2};  // Remaining elements are 0
```

Accessing Array Elements

Array elements are accessed using their index, starting from 0.

Example:

```
int numbers[5] = {10, 20, 30, 40, 50};
printf("%d", numbers[0]);  // Outputs 10
```
