A **multidimensional array** is an array of arrays. The most common type is the **two-dimensional array**, which can be visualized as a table with rows and columns.

Declaring Multidimensional Arrays

To declare a two-dimensional array:

Syntax:

data_type array_name[rows][columns];

Example:

```
int matrix[3][4];  // Declares a 3x4 matrix (3 rows, 4 columns)
```

Initializing Multidimensional Arrays

You can initialize a two-dimensional array at declaration.

Example:

```
int matrix[2][3] = {
    {1, 2, 3},
    {4, 5, 6}
};
```
