Accessing Elements in Multidimensional Arrays

Elements are accessed using two indices: one for the row and one for the column.

Example:

```
int matrix[2][3] = {{1, 2, 3}, {4, 5, 6}};
printf("%d", matrix[0][1]);  // Outputs 2
```

Iterating Through Multidimensional Arrays

Nested loops are typically used to access each element of a multidimensional array.

Example:

```
int i, j;
int matrix[2][3] = {{1, 2, 3}, {4, 5, 6}};
for (i = 0; i < 2; i++) {
    for (j = 0; j < 3; j++) {
        printf("%d ", matrix[i][j]);
    }
    printf("\n");
}
```
