Higher-Dimensional Arrays

You can also declare arrays with more than two dimensions (e.g., 3D arrays).

Example:

int cube[2][3][4]; // Declares a 3D array with 2 layers, 3 rows, and 4 columns

---

5.3 String Handling and Standard Library Functions

What are Strings?

A **string** in C is an array of characters terminated by a null character ('\0'). Strings are used to store and manipulate sequences of characters.

Declaring Strings

Strings are declared as character arrays.

Example:

char name[20];
