## Initializing Strings

You can initialize a string in two ways:

**Using a character array:**

```
char name[6] = {'H', 'e', 'l', 'l', 'o', '\0'};
```

1.

**Using a string literal:**

```
char name[] = "Hello";  // The compiler adds '\0' automatically
```

2.

## String Input/Output

**Reading Strings:**

```
char name[20];
printf("Enter your name: ");
scanf("%s", name);  // Note: `scanf` reads input until the first space
```

**Printing Strings:**
