strcat - String Concatenation:

Appends one string to the end of another.

```
char str1[20] = "Hello, ";
char str2[] = "World!";
strcat(str1, str2);  // str1 now contains "Hello, World!"
```

3.

strcmp - String Comparison:

Compares two strings lexicographically. Returns 0 if they are equal.

```
char str1[] = "apple";
char str2[] = "orange";
int result = strcmp(str1, str2);
```

4.

strchr - Find Character in String:

Searches for the first occurrence of a character in a string.

```
char str[] = "Hello";
char *ptr = strchr(str, 'e');  // Points to 'e' in "Hello"
```

5.
