```
student1.age = 20;

student1.gpa = 3.8;

// Access and print structure members

printf("Name: %s\n", student1.name);

printf("Age: %d\n", student1.age);

printf("GPA: %.2f\n", student1.gpa);

    return 0;

}
```

Initializing Structures

You can initialize a structure at the time of declaration:

```
struct Student student2 = {"Bob", 22, 3.5};
```
