```
    char name[50];
    int age;
    struct Address address;  // Nested structure
};

int main() {
    struct Student student1 = {"Alice", 20, {"123 Main St", "Springfield", 12345}};

    printf("Name: %s\n", student1.name);
    printf("Age: %d\n", student1.age);
    printf("Address: %s, %s, %d\n", student1.address.street, student1.address.city, student1.address.zip);

    return 0;
}
```
