```
char buffer[100];

size_t bytesRead = fread(buffer, sizeof(char), sizeof(buffer), file);

printf("Bytes read: %zu\n", bytesRead);
```

1.3 Writing to Files

Writing to a file in C is done using `fputc()`, `fputs()`, or `fwrite()`.

- **`fputc()`**: Writes a single character to a file.

```
fputc('A', file);
```

- **`fputs()`**: Writes a string to a file.

```
fputs("Hello, World!\n", file);
```

- **`fwrite()`**: Writes a block of data from a buffer to a file. This is useful for writing binary data.

```
char buffer[] = "Binary data example";

fwrite(buffer, sizeof(char), sizeof(buffer), file);
```
