-

"a" (Append Mode): In append mode, data is written at the end of the file. If the file doesn't exist, it's created. Existing content is preserved, and new content is added after the last byte of the file.

FILE *file = fopen("log.txt", "a");

-

"r+" (Read and Write Mode): This mode allows both reading and writing. The file must exist. If it doesn't, an error occurs.

FILE *file = fopen("data.txt", "r+");

-

"w+" (Write and Read Mode): In this mode, the file is created if it doesn't exist. If the file exists, its contents are erased, and both reading and writing operations are allowed.

FILE *file = fopen("temp.txt", "w+");

-

"a+" (Append and Read Mode): This mode allows both reading and appending. The file is created if it doesn't exist, and new data is always added to the end of the file.

FILE *file = fopen("notes.txt", "a+");
