```
}
```

### 3.4 Handling Errors While Writing to a File

If an error occurs while writing to a file, it's essential to check for it and handle the error accordingly.

```
if (ferror(file)) {
    printf("Error writing to the file.\n");
    clearerr(file);
}
```

### 3.5 Closing Files and Handling Closing Errors

When you close a file using `fclose()`, it may return `EOF` if an error occurs. Always check the return value to ensure that the file was closed properly.

```
if (fclose(file) == EOF) {
    printf("Error closing the file.\n");
}
```
