-

Checking a bit (is the bit 1 or 0?):

```
if (num & (1 << pos)) {
    // Bit at 'pos' is 1.
} else {
    // Bit at 'pos' is 0.
}
```

-

These operations are commonly used in embedded systems, device drivers, and networking applications, where control over individual bits is necessary.

9.3 Command-Line Arguments

Command-line arguments are parameters that are passed to a program when it is executed from the command line. These arguments allow users to provide input to the program at runtime, making the program more flexible and interactive.

9.3.1 Accessing Command-Line Arguments

In C, command-line arguments are passed to the `main()` function through two parameters: `argc` and `argv` .
