```
    }
    return 0;
}
```

If you run this program with the command:

```
$ ./program hello world
```

The output will be:

```
Number of arguments: 3
Argument 0: ./program
Argument 1: hello
Argument 2: world
```

9.3.3 Practical Uses of Command-Line Arguments

Command-line arguments are often used to:

-
